(Faculty of Education)
Jiwaji University, Gwalior (M.P.)

**Sponsored By: - SCERT/RSK, BHOPAL (M.P.)
Under centrally Sponsored Scheme of MHRD
Govt. Of India**

Introduction:

As information and communication technology (ICT) plays a greater role across society including public and private education, countries around the world are more than ever in need of high quality internationally comparable statistics on ICT in education. In particular, indicators are essential for measuring and tracking the integration of ICT and its impact given investment can constitute a significant portion of national education budgets.

Information and communication technology (ICT) has the potential to transform teaching and learning processes. However, most countries face challenges in measuring the impact of investments in infrastructure, massive roll-outs of teacher training initiatives, and usage in the classroom. The lack of a comprehensive set of indicators can partly explain current challenges. Moreover, there is a growing recognition that added focus on needed to measure teacher training and usage holistically within a systems perspective whereby indicators are not viewed in isolation but reflect a complex pattern of how teachers are prepared and how teaching activities with pupils, in and out schools and the classroom are executed.

Objectives:

The objectives of this program will be

1. Expanding usage indicators using a framework of teacher competencies.

2. The use of ICT-enhanced pedagogy in teaching.
3. Teacher usage of digital curriculum and assessment in education.
4. Teaching basic computer skills.
5. Teacher usage of ICT in administration and organization.
6. Teacher training and usage of ICT in education and gender.

Content of training

Workshop proposes the following elements to be captured under teacher training content:—

- Steps towards ICT integration
- Instructional practice through ICT
- Content knowledge and curriculum support through PPT
- Continuous lifelong learning
