ABOUT THE ICES-2022

Recent Advancement in Disaster Management, Agriculture and Environmental Sustainability

Agriculture sector plays a vital role in India's economy, as two-thirds of the total workforce of our country is dependent on agriculture and its allied activities for their livelihoods. However, it is greatly affected by human-induced hazards, climate variability and natural disasters such as droughts, floods, cyclones, hailstorms, frosts, diseases, pest attacks, fire, land degradation, animal menace, and chemical pollution, migration, post-harvesting damages or losses and so on. All these challenges, catastrophes and disasters have the potential to do great harm to people's lives in rural areas, especially if those locations already have preexisting vulnerabilities in their physical, economic, social, and environmental spheres. Natural disasters are becoming more frequent and more severe, that can affect crop yields (both positively and negatively) because it is so susceptible to climate change as well as the types of crops that can be grown in certain areas. Thus Indian agriculture is vulnerable to multiple disaster of natural and anthropogenic nature and is also aggravated by the impact of environmental modifications due to climate change.

The importance of sustainable rural development is highlighted by the fact that approximately 75 per cent of the absolute poor in developing countries live in rural areas, where they depend mostly on agriculture for their livelihoods. Humanity has the ability to make development sustainable: to ensure that it meets the needs of the present without compromising the ability of future generations to meet their own needs. Economic development and the management of natural resources were linked in time and space. So this conference, articulated in three burning issues, what are the advances to face the natural disaster i.e. disaster management, application of latest technology such as nanotechnology and DNA recombinant technology to increase the agricultural production along with the improvement in socio-economic condition of rural people, as well as well for better relationships to environmental sustainability.
