❑ **Category**

▪ **Work Performance Data**

# CONTENT

- **Work Performance Information**

- **Work Performance Reports**

# INTRODUCTION

❑ PMS is basically an aggregation of

- Processes, tools,
- Techniques, methodologies,
- Resources, and procedures
- To manage a project.

# **Adaptive Project Management**

- To initiate, plan, implement, adapt and close a project

- To fulfill needs of the beneficiaries

- And expectations of key stakeholders.

# Leadership

- To best resolve conflicts and manage agreement,

- And how to enhance communications effectiveness.

# Leadership

- Skills to get the maximum performance

- From every member of the team.

# Result Oriented

- Processes and methods that will help

- Development projects achieve the desired results.

# Result Oriented

- Responsibility to manage or contribute

- To the results of a project;

- Especially project managers,

# Result Oriented

- Team members and program directors.

# CATEGORY

- Work performance data

- Work performance information

- Work performance reports

# Work Performance Data

- It regards to the observations and measurements made towards

- All the work carried out by the project manager and his/her team.

# Work Performance Data

- It includes information about the project activities

- Like defining the percentage of work completed

# Work Performance Data

- Physically,

- Technical,

- and quality performance measurement of the project,

# Work Performance Data

- And providing updates on the scheduled work/activities (start and finish date).

- It also includes the total number of change requests

# **Work Performance Data**

- That have occurred during the execution of the project,

- And the number of defects detected in the project.

# Work Performance Data

❑It also includes information about the actual cost of the project,

❑The exact time taken to complete a scheduled task so on and so forth.

# Work Performance Data

☐These mentioned above are usually recorded

■ Project Management Information System' - (PMIS)

■ And project documents.

# Work Performance Information

- Project Management plan should include a routine

- Collection of work performance information.

# Work Performance Information

- The gathered information is essential and serves as a guidance tool

- For conducting quality control measures and programs.

# Work Performance Information

- Work performance information helps

- In measuring the project deliverables status,

- Ensuring that the required corrective actions are carried out,

# Work Performance Information

- And assists in creating performance reports.

- Analyzing the work performance information is crucial

- For the project management plan,

# Work Performance Information

- And it should be considered as a priority at all times.

# Work Performance Reports

- Work performance reports are the result of Monitor

- and Control project work process, and acts

# Work Performance Reports

- An input to various managing and controlling processes.

- Performance reports include different information and data

# Work Performance Reports

- About the project's  parameters  and updates on the progress of the project.

- It organizes and summarizes the information gathered

# Work Performance Reports

- Through the work performance data and work

- Performance information methods and presents it to the project's stakeholders.

# Work Performance Reports

- In a way that they can understand the direction or progress of the project.

- These reports show the stakeholders the current status of the project

# **Work Performance Reports**

- And its performance against the planned baseline.

- The project is completed within the prescribed budget and time.

THANK YOU
