SYLLABUS
OF
M.Sc. ENVIRONMENTAL
CHEMISTRY
(2020-2022)

SCHOOL OF STUDIES ENVIRONMENTAL CHEMISTRY,
JIWAJI UNIVERSITY, GWALIOR

Syllabus of M.Sc. Environmental Chemistry (2020-2022)

First Semester

M.M.: 60

EC-101: Fundamentals of Quantitative Analysis and Separation Methods

Unit-I: Concepts involved in Analysis

Role of analytical chemistry, classification of analytical methods-classical and instrumental, types of instrumental analysis, selecting analysis method, neatness and cleanliness, laboratory operations and practices, good laboratory practices, techniques of weighing, errors, volumetric glassware-cleaning and calibration of glassware, sample preparation – dissolution and decompositions, selecting and handling reagents, Dissolution -Testing, type, application, laboratory notebooks, safety in the analytical laboratory, calibration and detection limits, proficiency testing.

Unit-II: Separation Techniques -I

(A) Solvent Extraction: Fundamental treatment, theoretical principle, classification, and factors favouring extraction, extraction equilibria, applications.

(B) Solid phase extraction and solid phase micro extraction, applications.

(C) Ion- Exchange: Theories, use of synthetic ion exchange in separation, chelating ion exchange resins, liquid ion exchangers, experimental technique.

Unit-III: Separation Techniques -II

An introduction to chromatographic methods, paper, thin layer and column chromatography, theory of chromatography, classification of chromatographic techniques, retention time, relationship between retention time and partition coefficient, the rate of solute migration, differential migration rates, band broadening & column efficiency, kinetic variables affecting band broadening, Electrophoresis and capillary electrophoresis.

Unit-IV: Separation Techniques -III

GC, Principle of GC, plate theory for GC, instrumentation for GC, working of GC, Detectors used, applications, , HPLC, Principle of HPLC, Components of HPLC, Detectors used, instrumentation, applications in qualitative and quantitative analysis, comparison of GC and HPLC.

Unit-IV: Separation Techniques -IV

Size exclusion chromatography, super critical fluid chromatography, affinity chromatography, HPTLC, Ion chromatography, pyrolytic gas chromatography.

A handwritten signature and the name 'Anish' written in cursive script.

Books Recommended

1. D.A. Skoog, F.J. Holler and T.A. Nieman, Principles of Instrumental Methods, 5th ed., Thomson Asia Pvt. Ltd., Singapore (2003).
2. R.A. Day and A.L. Underwood, Quantitative Analysis, 6th ed., Prentice Hall of India Pvt. Ltd (1993).
3. G.D. Christian, Analytical Chemistry, 6th ed, John Wiley & Sons (2001).
4. S.M. Khopker, Environmental Pollution Analysis, 2nd ed., New Age International Pvt. Ltd.(2002).
5. A.I. Vogel, Textbook of Quantitative Chemical Analysis, 5th ed., Addison Wesley Longman Singapore (1999)
6. G. W. Eving, Instrumental Methods of Chemical Analysis, 5th ed.,Mc-Graw Hill Book Company (1985).
7. Willard, Merritt, Dean, and Settle, Instrumental Methods of Analysis, 7th ed., C B S Publishers &Distributors (1986).

A handwritten signature in black ink, consisting of a stylized 'S' followed by a long horizontal line and the word 'Dishy' written below it.

EC-102: Stereochemistry and Thermo-analytical Methods

M.M.: 60

Unit-I: Stereochemistry

- (A) Conformational analysis: Conformation of n-butane and cyclohexane, stability of conformers and energy profile diagram.
- (B) Optical activity: Criteria for optical activity, stereoisomers, enantiomers and diastereomers, erythro and threo isomers, a general idea of symmetry elements.
- (C) Racemic Modifications: Conglomerate, racemate and racemic solid solutions, a general idea of stereo selective synthesis.
- (D) Resolution of Racemic modifications: by Chemical separation, chromatography, preferential crystallization and asymmetric transformation (a brief idea only).

Unit-II: Solution reactions: fundamental theory

The Law of Mass Action, Activity and Activity Coefficient, Factors affecting chemical reactions in solution, The ionic product of water, Electrolytic dissociation, Strengths of acids and bases, Solubility Product, Common ion effect, Effect of acid, temperature and solvent on the solubility of the precipitate, Complexation, stability of complexes, Complexones

Unit-III: Titrimetric and Gravimetric Methods of Analysis

General principles: Solvents in analytical chemistry, buffers, acid-base equilibria, concentration systems, stoichiometric calculation, acid-base titration, titration curves, acid base indicators, applications of acid-base titration, complexometric titration, metal-ion indicators, precipitation titration, Mohr's titration, Volhard's titration, adsorption indicators, Fajan's titration, titration curves in oxidation-reduction titration, redox indicators, applications of redox titrations, Karl Fischer Titration.

Unit-IV: Thermo-analytical Methods

Thermogravimetry, factors affecting thermogravimetric curves, derivative thermogravimetry (DTG), thermobalances, applications of thermogravimetry, differential thermal analysis, factors affecting DTA curve, instrumentation, applications of DTA.

Differential scanning calorimetry, theory, instrumentation, applications of DSC, thermometric titration, principle, classification, instrumentation and applications of thermometric titration.

Unit-V: Principles of Gravimetric Analysis

Stoichiometry of gravimetric reactions, formation and properties of precipitates, precipitation from homogeneous solution, nucleation, organic precipitations, applications of gravimetric analysis.

Books Recommended

- (a) D.A. Skoog, F.J. Holler and Nieman, Principles of Instrumental Methods, 5th ed., Thomson Asia Pvt. Ltd., Singapore (2003).
- (b) R.A. Day and A.L. Underwood, Quantitative Analysis, 6th ed., Prentice Hall of India Pvt. Ltd. (1993).
- (c) G.D. Christian., Analytical Chemistry, 6th ed, John Wiley & Sons (2000)
- (d) A.I. Vogel, Textbook of Quantitative Chemical Analysis, 5th ed., Addison Wesley Longman Singapore Ltd. (1999)
- (e) G. W. Eving, Instrumental Methods of Chemical Analysis, 5th ed. Mc-Graw Hill Book Company (1985)
- 6. Ernest L. Eliel and Samuel H. Wilen, Stereochemistry of Organic Compounds, John Wiley & Sons (2003).

Handwritten signature and initials at the bottom of the page.

Unit-I: Colorimetry and Spectrophotometry

An introduction to spectrophotometric methods, a brief idea of wave properties of electromagnetic radiation, theory of spectrophotometry and colorimetry, conjugated dienes, woodward fieser rules for calculating absorption maxima in dienes, transition probability, types of absorption bands, types of electronic transitions, chromophores, auxochromes, absorption and intensity shift, limitations of Beer's Law, classification of methods of colour measurement, instrumentation single beam and double beam, photometric error, applications of spectrophotometry to inorganic and organic compounds (quantitative calculations), spectrophotometric titration.

Unit-II: Other Spectro-analytical techniques

(A) Introduction, general principle, instruments for nephelometry and turbidimetry, applications of nephelometry and turbidimetry to analytical chemistry.

(B) Dispersion Refractometry and Flame photometry

(C) Polarometry, circular dichroism (CD) and optical rotatory dispersion (ORD).

Unit-III: Emission Spectroscopy

Elementary idea of emission spectroscopy, introduction, elementary theory, instrumentation, types of flames, interferences, factors affecting flame photometry, applications to qualitative and quantitative analysis, limitations.

Unit-IV: Fluorescence and Phosphorescence Spectrophotometry

Theory of fluorescence and phosphorescence, quantum yield, factors affecting fluorescence and phosphorescence, relation between concentration and intensity, instrumentation, applications, an elementary idea of chemiluminescence.

Unit-V: Kinetic of Slow and Fast reactions (An elementary study keeping in view its applications in analytical chemistry)

(A) Rates of chemical reaction, expression for reaction rate, rate constants, order of reaction, methods for determination of order of reaction, Arrhenius equation, Collision theory, failure of collision theory, Absolute reaction rate theory, unimolecular reactions, mathematical formulation of Lindemann's theory, catalysed reactions, Theory of homogenous catalysed reactions, kinetics of enzyme catalysed reactions, elementary idea of micellar catalysis.

(B) Study of fast reactions by stopped flow method, relaxation methods, flash photolysis method, photochemical reactions, kinetics of photochemical combination of hydrogen and chlorine, branched chain reactions, oscillatory reactions, applications of kinetic methods in finding out optimum conditions for different reactions.

Books Recommended

1. John. R. Dyer, Applications of Absorption Spectroscopy of Organic compounds, 9th ed., Prentice Hall of India Pvt. Ltd. (1994).
2. Dudley H. Williams and Ian Fleming, Spectroscopic Methods in Organic Chemistry, 4th ed., Tata McGraw Hill Book Company (1998).
3. R.M. Silverstein, G. Clayton Bassler and Terence C. Morrill, Spectroscopic Identification of Organic compounds, 6th ed, John Wiley & Sons (1998).
4. D.A. Skoog, F.J. Holler and Nieman, Principles of Instrumental Methods, 5th ed., Thomson Asia Pvt. Ltd., Singapore (2003).
5. R.A. Day and A.L. Underwood, Quantitative Analysis, 6th ed., Prentice Hall of India Pvt. Ltd. (1993).
6. G.D. Christian., Analytical Chemistry, 6th ed, John Wiley & Sons (2000)
7. A.I. Vogel, Textbook of Quantitative Chemical Analysis, 5th ed., Addison Wesley Longman Singapore (1999)

A handwritten signature in black ink, consisting of a stylized 'J' or 'G' followed by a horizontal line and the word 'Dish' written below it.

Unit-I: Fundamentals

Electrochemical cells, solution structure, potential in electroanalytical cells, Nernst equation, electrode potential the ideal polarized and non-polarized electrodes, faradiac reaction, variables in electrochemical cells, factors affecting electrode reaction rate and current, decomposition potential, back potential and over voltage.

Unit-II: Potentiometry

Introduction, reference electrodes, indicator electrodes, ion-selective electrodes and their applications in chemical analysis, instrumentation and measurement of cell unit, direct potentiometry, potentiometric titration, applications.

Unit-III: Polarography

Direct current polarography, basic principle, instrumentation, advantages and disadvantages of dropping mercury electrode, different kinds of limiting currents, components of polarographic waves, reversible and irreversible waves, pulse and A.C. polarography, applications of polarography to inorganic and organic compounds, elementary idea of stripping voltammetry, amperometric titrations.

Unit-IV: Conductometry and Coulometry

Conductometry as an analytical tool, applications of direct conductometric measurements, basis of conductometric titrations, applications of conductometry titration, constant current and controlled potential electro-gravimetry, separation of metals, coulometry at controlled potential, coulometry at constant current, applications.

Unit-V: Voltammetry

AC polarography, current sampled (TAST) polarography, normal pulse and differential pulse polarography, stripping voltammetry, linear sweep and cyclic voltammetry, chonopotentiometry, chronoamperometry.

Books Recommended

1. Allen J. Bard and Larry R. Faulkner, *Electro-chemical Methods*, 2nd ed., John Wiley & Sons (2001).
2. G.D. Christian, *Analytical Chemistry*, 6th ed, John Wiley & Sons (2001).
3. A.I. Vogel, *Textbook of Quantitative Chemical Analysis*, 5th ed., Addison Wesley Long man Singapore Ltd. (1999)
4. Galen W. Eving, *Instrumental Methods of Chemical Analysis*, 5th ed., Mc-Graw Hill Book company (1985).
5. Willard, Merritt, Dean, and Settle, *Instrumental Methods of Analysis*, 7th ed., C B S Publishers & Distributors (1986).

Second Semester

EC -201: Environmental and Pollution Control

M.M.: 60

Unit-I: Air Pollution

Atmospheric pollution, classification of air pollutants, sources of air pollutants and methods of control, sampling of aerosols, sampling of gaseous pollutants, analysis of SO_x , NO_x , CO-CO₂, hydrocarbons, effects of air pollutants, ozone layer, chlorofluorocarbons, acid rain, green house effect.

Unit-II: Water Pollution

Sampling and preservation of water, physical examination of water-colour, alkalinity, TDS, conductivity, temperature, odour, turbidity, hardness, chemical examination of water-determination of carbonates and bicarbonates, sulphate, chloride and fluoride, nitrite and nitrate, iron, manganese, silica, cadmium, arsenic, chromium, lead, mercury, biological examination of water-dissolved oxygen, BOD, COD, MPN. Organic pollutant analysis-phenols and detergents.

Unit-III: Water treatment

Quality of water, standards of raw and treated water, objectives of waste water treatment, A brief idea of sedimentation, coagulation and flocculation, filtration, disinfection of water, activated sludge process, trickling filters, sludge treatment and disposal.

Unit-IV: Softening of water, corrosion and its control, removal of nitrogen and phosphorus. Removal of toxic compounds and refractory organics, removal of dissolved inorganic substances, Reverse osmosis.

Unit-V: (A) Soil Pollution

A brief idea of chemistry of soil. Macro and micro elements in soil and their functions, Pesticide, Soil profile and pollution, classification and degradation of pesticides, methods of pesticides analysis. Remediation of polluted soil.

(B) Noise Pollution

Sources, measurement, effects and control.

Books Recommended

1. Gilbert M. Masters, Introduction to Environmental Engineering and Science, 3rd ed. Prentice Hall of India Pvt. Ltd. (1998)
2. C. S. Rao, Environmental Pollution Control Engineering, 3rd ed., Wiley Eastern Ltd. New Age International Pvt. Ltd. (1995).
3. Metcalf & Eddy, Waste Water Engineering, Tata McGraw Hill, New Delhi (2003).
4. C. Harold Wright, A Hand book of Soil Analysis, 4th ed., Logas press New Delhi –
5. Thomous S. Spiro and William M. Stiglicini, Chemistry of the Environment, Prentice Hall of India Pvt. Ltd. (2002).
6. Nicholas P. Cherimisinoff, Biotechnology for Waste and wastewater treatment, Prentice Hall of India Pvt. Ltd. (2001).
7. Jarry A. Nathanson, Basic Environmental Technology, 4th ed., Prentice Hall of India Pvt. Ltd. (2003).
8. Raymond W. Miller and Roy L. Donalvee, Soil in Our Environment, 7th ed, Prentice Hall of India Pvt. Ltd. (1997).
9. Nylie C. Brady, The Nature and Properties of Soil, 10th ed., Prentice Hall of India Pvt. Ltd. (1996).

Unit-I: Atomic Absorption and Emission Spectroscopy.

Theory of atomic spectroscopy, the origin of spectral transition, the populations of energy levels, the factors influencing spectral width, atomic absorption spectroscopy (AAS), instrumentation, interferences, applications, various non-flame emission sources, applications of atomic emission spectroscopy, comparison of atomic emission and atomic absorption methods, Inductively Coupled Plasma Atomic Emission Spectroscopy (ICP-AES), instrumentation of ICP-AES, applications of ICP-AES, Comparison of ICP-AES with AAS.

Unit-II: Infrared Spectroscopy

Theory of Infrared absorption, vibrational modes, vibrational coupling, Near IR Spectroscopy, instrumentation, dispersive and non-dispersive instrument, FTIR, sampling techniques qualitative applications and interpretation of spectra, quantitative applications. A brief idea of Raman spectroscopy.

Unit-III: Nuclear Magnetic Resonance Spectroscopy

Theory of NMR, chemical shift and spin-spin splitting, relaxation process of saturation, environmental effects on NMR spectra, instrumentation, CW or FT NMR instrument, Rules governing the interpretation of first order spectra, applications to quantitative analysis.

Unit-IV: Carbon-13 NMR

Historical development, proton decoupling-broad band, Off-resonance and pulsed or gated decoupling, nuclear overhauser enhancement, polarization transfer experiments-DEPT and INEPT chemical shifts, spin-spin coupling impacts, application of ^{13}C NMR to structure determination, two-dimensional NMR spectroscopy, principle, the COSY experiment, the COSY experiment with double quantum filter (COSY-DQF), the NOESY experiment, three-dimensional NMR experiment, APT and INADEQUATE techniques.

Unit-V: Mass Spectrometry

Theory of mass spectrometry, practical considerations, ion production, depletion of ions, ion detector, calibration, other ionization techniques: chemical ionization, fast atom bombardment (FAB), and electrospray, interpretation of the mass spectrum of the compound, Mc Lafferty rearrangement, Mass analyzers, determination of molecular formula, nitrogen rule, general fragmentation modes, applications of mass spectrometry.

Books Recommended

1. John. R. Dyer, Applications of Absorption Spectroscopy of Organic compounds, 9th ed., Prantice Hall of India Pvt. Ltd. (1994).
2. Dudley H. Williams and Ian Fleming, Spectroscopic Methods in Organic chemistry, 4th ed., Tata Mc-Graw Hill Book company (1998).
3. R.M. Silverstein, G. Clayton Bassler, and Terence C. Morrill, Spectroscopic Identification of Organic Compounds, 6th ed., John Wiley & Sons (1998).
4. C.N. Ban well, Fundamentals of Molecular Spectroscopy, Tata Mc-Graw Hill Book company (1998).
5. Manas Chanda, Atomic Structure and Chemical Bond, Tata Mc-Graw Hill Book company (1998).

203: New trends in Instrumentation

M.M.:60

Unit-I: Statistical Treatment of Data-I

Types of errors, accuracy and precision, rounding off, significant figures, normal distribution of errors, statistical treatment of finite samples (mean, median, range & average deviation), t-test, confidence interval of the mean, standard error of a mean, test of significance, comparison of two means, F-test, rejection of data, Q-test, bivariate data, Quality control charts, relationship between variables, correlation & regression, principle of least squares.

Unit-II: Statistical Treatment of Data-II

Overview of quantitative analysis of drugs, validation of analytical procedure in pharmaceutical formulation (LOD, LOQ, Robustness, Specificity, Accuracy, Precision, Selectivity, Linearity, Ruggedness, Reproducibility, Repeatability), Recovery analysis, Error bars, Study design.

Unit-III: Statistical Treatment of Data-III

Chi square, ANOVA-1 way classification, ANOVA-2 way classification, Lotka-Voltra Model and Lesle's matrix model, Box model and Gaussian Plume Model, normal distribution, skewness.

Unit-IV: Spectro-analytical methods of analysis

Scanning Electron Microscopy (SEM), Transmission Electron Microscopy (TEM), Scanning Tunneling Microscopy (STM), Atomic Force Microscopy (AFM) and its applications, Microwave Spectroscopy, Comparison of Electron Microscopy with electron spectroscopy.

Unit-V: Photoelectron Spectroscopy

Ultraviolet (U.V.) and X-ray Photoelectron Spectroscopy, basic concepts and applications. Concept of AUGER Photoelectron Spectroscopy and applications. Determination of kinetic energy of an electron by using different methods, Difference between AUGER and Fluorescence phenomenon.

Books Recommended

1. John. R. Dyer, Applications of Absorption Spectroscopy of Organic compounds, 9th ed., Prentice Hall of India Pvt. Ltd. (1994).
2. Dudley H. Williams and Ian Fleming, Spectroscopic Methods in Organic Chemistry, 4th ed., Tata Mc-Graw Hill Book Company (1998).
3. R.M. Silverstein, G. Clayton Bassler and Terence C. Morrill, Spectroscopic Identification of Organic compounds, 6th ed, John Wiley & Sons (1998).
4. D.A. Skoog, F.J. Holler and Nieman, Principles of Instrumental Methods, 5th ed., Thomson Asia Pvt. Ltd., Singapore (2003).
5. R.A. Day and A.L. Underwood, Quantitative Analysis, 6th ed., Prentice Hall of India Pvt. Ltd. (1993).
6. G.D. Christian., Analytical Chemistry, 6th ed, John Wiley & Sons (2000)
7. A.I. Vogel, Textbook of Quantitative Chemical Analysis, 5th ed., Addison Wesley Longman Singapore (1999)
8. Jagmohan, Organic Spectroscopy-Principles and applications, 2nd ed, Narosa Publishing House, New Delhi
9. C.S. Rao, Environmental Pollution Control Engineering, Wiley Eastern Ltd., New Age International Ltd., (1995)

EC -204: Fundamental of Organic Reactions

M.M.:60

Unit-I: Nucleophilic substitution

Mechanism of SN^1 and SN^2 reactions, SN^i and SET mechanism, The neighboring group mechanism, Effects of substrate structure, Attacking nucleophile, Leaving group and reaction medium on SN^1 and SN^2 reactions, Benzyne reaction, Evidences infavour of benzyne reaction.

Unit-II: Electrophilic substitution

Electrophilic substitution reaction of benzyne, Nitration halogenations, Sulphonation , Friedel craft reaction, Energy profile diagram, The ortho/ para ratio, IPSO attack, Diazonium coupling reaction, Gattermann-koch reaction, Vilsmeier reaction.

Unit-III: Elimination reaction

Mechanism of E-1, E-2 and E1CB reactions, Difference between substitution and elimination reactions, Saytzeff rule, The Hoffmann rule, Effects of substrate structure, Nature of base, Nature of solvents and temperature on elimination reactions.

Unit-IV: Addition reaction

Electrophilic additions, Markovnikov's rule, Peroxide effect, Hydroboration, sharpless asymmetric epoxidation, Regio and chemoselectivity, Diel's - Alder reaction, ozonolysis, Hydrogenation of alkene and alkynes, Mechanism of Aldol, Claisen, Perkin and Benzoin condensations.

Unit-V: Free radicals

Stability of free radicals, Polymerization, halogenations of alkanes via chain reaction, Bromination by N- bromo succinimide (NBS), Addition of halogens and halogen acids, Autooxidation, Sandmeyer reaction, Hansdiecker reaction, Free radical rearrangement reaction.

Books Recommended

1. Advanced organic chemistry- reactions, mechanism and structure, Jerry March, John Wiley.
2. Organic chemistry, R.T Morrism and R.N. Boyel, Prentice Hall.
3. Reaction mechanism in organic chemistry, S.M. Mukherji and S.P. Singh. Trinity Publisher, New Delhi.
4. Advanced organic chemistry, Jagdamba singh & L.D.S. Yadav. Pragati Prakashan, Meerut.
5. Advanced general organic chemistry, S.K. Ghosh. New central Book Agency(p) ltd. Kolkata

Third Semester

EC-301: Industrial Waste and Water Treatment

M.M.: 60

Unit-I: An Introduction to Source, Characteristics and Treatment of Industrial Waste

Undesirable waste characteristics, sources and characteristics of waste water, industrial waste survey, waste characteristics - estimation of organic content, water reuse and in-plant waste control, idea of different technologies for the treatment of industrial waste water and the basis for the selection of treatment technology.

Unit-II: Treatment of Industrial Wastes

Different steps in the treatment of industrial waste (equalization, neutralization, sedimentation, oil separation, flotation, coagulation), sources and removal of heavy metals e.g. As, Ba, Cd, Cu, F, Fe, Rb, Mn, Hg, Ni, Se, Ag & Zn)

Unit-III: Advance Water Treatment of Industrial Waste - I

Aeration, air stripping of volatile organics (VOC), biological oxidation - removal of organics (sorption, stripping, biodegradation), nitrification and de-nitrification.

Unit-IV: Advance Water Treatment of Industrial Waste - I

Lagoons and stabilization basins, membrane processes, trickling filtration, adsorption, ion exchange, chemical oxidation, sludge dewatering and disposal.

Unit-V: Waste Water Reuse and Recovery

Treatment, disposal, reuse and recovery of trade waste from (1) Textile Manufacture (2) Distilleries (3) Sugar (4) Paper and Pulp mills (4) Tanneries (5) Food Processing industries (6) Fertilizer Industry.

Books Recommended

1. Thomous S. Spiro and William M. Stiglicini, Chemistry of The Environment, Prentice Hall of India Pvt. Ltd. (2002)
2. Nicholas P. Cherimisinoff, Biotechnology for Waste and Waste Water Treatment, Prentice Hall of India Pvt. Ltd. (2001).
3. Jarry A. Nathanson, Basic Environmental Technology, 4th ed, Prentice Hall of India Pvt. Ltd. (2003).
4. W. Wesley Eckenfelder, Industrial Water Pollution Control, 2nd ed., Tata Mc-Graw Hill Book Company (1989).
5. P.K. Sinha, Computer Fundamentals, 2nd ed., BPB publication (1992).
6. Richard W. Brightman, Jaffery M. Dimsdale, Using Microcomputers, Galgotia Publications (1994).

Handwritten signature and initials in black ink, located at the bottom center of the page. The signature appears to be 'Dhruv' and the initials are 'DH'.

**EC 302: Environmental Toxicology and Environmental Impact Assessment
(Major Elective)**

M.M.:

60

Unit - I: An Introduction to Impact Assessment

Introduction to EIA, impact assessment methodologies, environmental inventory, environmental impact assessment (planning and management), environmental indices and indicators for describing the affected environment, EIA guidelines, introduction to environmental impact statement, assessment of chlorofluorocarbons and carbon dioxide on the overall environment changes in stratospheric ozone.

Unit - II: A study of Impact Assessment -I

Assessment of impacts on the surface water environment, identification of surface water quality or quality impacts, impact prediction, identification and incorporation of mitigation measures, background information on the soil environment, ground water quantity and quality, conceptual approach for addressing soil and ground water environment impacts, identification of the types and quantities of air pollutants and of their impacts, impact prediction, identification and incorporation of mitigation measures.

Unit -III: A study of Impact Assessment-II

Prediction and assessment of impact on the noise environment, prediction and assessment of impacts on the biological environment; a brief idea of prediction and assessment of impacts on the cultural and socioeconomic environment, preparation of reports of the environmental impact study findings.

Unit - IV: Some Case Studies of Environmental Impact Assessment and Sustainable development.

- (A) A brief idea of environmental impacts of oil, natural gas, coal, hydroelectric development, nuclear power, thermal power project, mining & mineral processes.
- (B) Concept and strategies of sustainable development, environmental priorities of sustainable development in India.

Unit - V: Environmental Toxicology

(A) Toxicology and Pharmacokinetics: One-Compartment Model, Two-Compartment Model, Applications to Toxicology Testing, Toxic effects and dose response relationship a brief idea of carcinogens and non-carcinogens, Biotransformation, Biomarker, Xenobiotics, Toxicity due to Hydrocarbons and pesticides.

(B) Impact of Toxic Chemical on Enzymes: Biochemical effects of arsenic, cadmium, lead, mercury, carbon monoxide, cyanide

Books Recommended

1. Larry W. Canter, Environmental Impact Assessment, 2nd ed, Tata Mc Graw Hill (1996).
2. J.M.Dewan and K.N. Sudarshan, Hazardous Waste Management, 1st ed., Discovery Publishing (1996).
3. Michea D. Lagrega, Hazardous Waste Management, 1st ed., Tata Mc Graw Hill Book Company
4. M. Satake and Y.Midostal, Environmental Toxicology, 1st ed., Discovery Publishing House (1997).
5. Jan C. Shaw and John Chadwick, Principles of Environmental Toxicology, Galgotia Publication Pvt. Ltd. (1998).

6. R.E. Hester and R.M. Harrison, Risk Assessment and Risk Management, 1st ed., Royal Society of India (1998).
7. Colin Baird, Environmental chemistry fourth edition, W. H. Freeman and company New York.
8. Frank A. Barile, Principles of toxicology Testing John's University Queens, New York

EC 302: Biotechnology, Toxicology and Environmental Management (Major Elective)

M.M.: 60

UNIT I

1. Role of Biotechnology in environmental protection.
2. Plant Tissue culture: Principles, methods and its application.
3. Genetic engineering.
4. Biotechnological methods in pollution abatement.
5. Genetically engineered microbes in Bio treatment of waste and environment.

UNIT II

1. Bioabsorption of metals.
2. Biopolymers and Bioplastics.
3. Biofuels and Biodiesel.
4. Biofertilizers and Biopesticides.
5. Bioleaching.

UNIT III

1. Eco-friendly bio-products for environmental health.
2. Fermentation Technology.
3. Vermiculture Biotechnology.
4. Mushroom culture technology.
5. Hydroponics and their role in waste water management.

UNIT IV

1. Definition, scope, goals and divisions of environmental toxicology.
2. Factors affecting environmental concentration of toxicants.
3. Toxicity of chemical mixtures in environment.
4. Dose, effect, response and dose response relationship.
5. Environmental impact of nanotechnology.

UNIT V

1. Membrane permeability & mechanism of chemical transfer .
2. Xenobiotic compounds in the Environment.
3. Degradation of Xenobiotic compounds.
4. Toxicity testing methods (single and multi - species, acute, sub-acute and chronic toxicity tests).
5. Teratogenicity, Mutagenicity, Carcinogenicity and Environmental Diseases.

Books Recommended

- Kaiser Klaus L.E. 1984: QSAR in environmental toxicology. D. Reidel publishing company.
- Landis wayne G., Yu ming-Ho 1998: Introduction to environmental toxicology impacts of chemical up on ecological systems, second edition. Lewis publishers London new York Washington D.C. .
- Thakur Indu Shekhar 2011: Environmental Biotechnology (Second edition)

E.C 303: Energy and Environmental Geochemistry
60

M.M.:

Unit-I: Energy, Man and Environment

(A) Energy and energy science: Law of conservation of energy, different forms of energy, fuel and energy resources and forms of energy (conventional and renewable resources for electrical generation), national energy strategies and national energy plan, energy management, conservation and audit.

(B) Alternative and renewable energy sources: Wind energy and wind turbine power plants, energy from ocean, geothermal energy and power plant, nuclear energy – fission and fusion principle and energy resources.

Unit- II: Solar Energy

(A) Introduction, Sun as a source of energy, solar radiation and its spectral characteristics, solar radiation measurements, solar collectors, solar photovoltaic, solar energy storage system, solar ponds, applications of solar energy.

Unit-III: Biomass Energy Resources

Biomass energy resources, resources of conversion of biomass into useful energy, raw biomass material for conversion to biogas, biogas generator (factors affecting biodegradation or generation of gas) significance of biogas plants in India's energy strategy, biogas plants, fuel properties and utilization of biogas, biomass as source of energy.

Unit- IV: Other Energy Sources and Pollution Control

(A) Chemical Energy Sources: Fuel cells, principle of operation of a fuel cell (also theory), classification and types of fuel cells, advantages and disadvantages of fuel cells, conversion efficiency of fuel cells, applications of fuel cells.

(B) Pollution Control of Major Pollutants: Pollution from use of energy: combustion products of fossil fuels, methods of controls of major pollutants - SO_x [Flue gas desulphurization (FGD) systems], removal of NO_x from flue gas (De-NO_x system)

Unit V: Mineral Resources and Environmental Hazards

(A) Types of mineral deposits, mineral and rock resources, new methods in mineral exploration, marine mineral resources, conservation of mineral resources, impacts of mining activities.

(B) Hydrological hazards: Floods and drought

Atmospheric hazards: Severe storms, temperature extreme and wild fires

Technological hazards: Bhopal Gas Tragedy and Chernobyl

Seismic hazards: Earthquake and volcanoes

Books Recommended

1. Carla W. Montgomery, Environmental Geology, 5th ed., Mc Graw Hill Higher Education (2000).
2. G.D.Rai, Non Conventional Energy Sources, 4th ed., Khanna Publication (1996).
3. S.A. Abbasi, Renewable Energy Sources and Their Environmental Impact, 1st ed. Ashok K. Ghosh, Prentice Hall of India (2001).
4. H.P. Garg and J.Prakash, Solar Energy Fundamentals and Applications, Tata Mc Graw Hill (1992).
5. S.P. Sukhantine, Solar Energy: Principles of Thermal Collection and Storage, 2nd ed., Tata Mc Graw Hill (1992).
6. S.Rao and B. Prulaker, Energy Technology, 1st ed., Khanna Publications (1996).

EC-304 Atmospheric Chemistry

M.M.: 60

Unit-I: Chemical composition and Meteorological aspects of air pollutants

Structure of atmosphere and its chemical composition: Pressure and temperature variation with altitude, adiabatic lapse rate, atmospheric lapse rate, stability of atmosphere, temperature inversion, Plume behavior, Gaussian plume, Wind velocity and turbulence.

Unit-II: Earth troposphere

Earth troposphere: Trace atmospheric constituents, sources, sinks, residence time and transport, Biogeochemical cycles: Carbon, Oxygen, Nitrogen and sulphur cycles, Aerosols: Classification, sources, important properties and effect on climate, Volatile Organic Compounds (VOCs)

Unit-III: Photochemistry

Solar radiation Spectrum, Photodissociation, Photodissociation of NO_2 , Formation of groundlevel ozone. Formation of groundlevel ozone, formation of hydroxyl hydroperoxy and organic radicals. Diurnal variation in OH Concentrations. Reactions of OH radicals with SO_2 , NO_2 , and CO.

Unit-IV: Stratospheric Chemistry

Photodissociation of O_2 , Formation of O_3 , Chapman mechanism, ozone depleting chemicals, CFCs, Halons etc, Ozone depletion by NO_x , HO_x , and ClO_x species. Antarctic ozone hole, role of photo and heterogenous chemistry, Damaging effect of stratospheric ozone loss, Ionization reaction in upper atmosphere. Chemistry of specific region.

Unit-V: Air Modelling and current carbon trends

Air modelling, air monitoring, Chemistry of carbon dioxide in atmosphere, CO_2 sequestration, Carbon trading, Carbon footprint

Books Recommended

1. Richard P. Wayne, Chemistry of Atmosphere 3rd ed., Oxford University Press (2000).
- 2 Seinfeld, J.H. and Pandis, S.N., Atmospheric Chemistry and Physics, John Wiley, Chichester (1998).
3. Hobbs P.V., Introduction to Atmospheric Chemistry, Cambridge University Press (1999).
4. C.S.Rao, Environmental Pollution Control Engineering, 3rd ed., Wiley Eastern Ltd. New Age International Pvt.Ltd. (1995).

Fourth Semester

EC 401: Environmental Laws and Management
60

M.M.:

Unit - I: Pollution Control Through Laws - I

National conservation strategy and policy on environment and development, international and national efforts for environmental protection, Rio declaration, the environment (Protection) Act 1986, hazardous waste (Management and handling) Rules 1989, air (Prevention and Control of Pollution) Act 1981 and rules 1982, the motor vehicle Act 1988.

Unit - II: Pollution Control Through Laws - II

The water (prevention and control of pollution) Act 1974 and rules 1975, global action on ozone 1989, public liability insurance Act, 1991, the national environment appellate authority Act, 1997, forest (conservation) Act, 1980, wild life (protection) Act 1972 amended 1991, Indian Forests Act (Revised) 1982, a brief idea of world conservation strategy (WCS) and national conservation strategy (NCS).

Unit - III: Environmental Management [ISO 14000]

Principles and elements for successful environmental management, elements of environmental management, creating an environmental management system, environmental management commitment and policy, leadership in an environmental management system, environmental management system audit, steps for registration to ISO14000. Preparing environmental management system for an organization.

Unit - IV: Natural Resources and Their Conservation

Types of natural resources and the need for their conservation, soil conservation, forest resources, deforestation, desertification, afforestation and protection of forestry, water resource management, a brief idea of rain water harvesting, wet land conservation, waste land and their reclamation, introduction to biodiversity and conservation of biodiversity in India, protection area network (National park, Sanctuary and Biosphere reserve).

Unit - V: Hazardous Waste Management

Definition of hazardous waste, the relationship of toxicology to hazardous waste management, approach to hazardous waste pollution prevention and reduction, the effectiveness for treatment of hazardous waste, transportation and treatment of hazardous waste, environmental audits and site assessment hazardous substance and risk assessment, Solid waste management, e-waste ,nuclear waste, biomedical waste management

-

A handwritten signature in black ink, consisting of a stylized, cursive script. The signature is written on a white background and appears to be a personal name, possibly 'Anish' or similar, followed by a long horizontal stroke.

Unit-I: Pesticides-I

Organochlorine insecticides, DDT, accumulation and the fate of organochlorine in biological systems, chlorinated cyclopentadiene, detection of pesticides by gas chromatography, organophosphate and carbamate insecticides, biopesticides, new generation pesticides.

Unit-II: Pesticides-II

Herbicides, triazine herbicides, phenoxy herbicides, dioxine contamination of herbicides and wood preservatives, polychlorinated biphenyls (PCBs), furan contamination of PCBs, toxicology of PCBs, trioxins and furans, biodiesel, biofertilizers.

Unit-III

(A) Polynuclear aromatic hydrocarbons (PAHs) as pollutants, mechanism of PAH carcinogenic, environmental estrogens.

(B) A brief idea of the following: Recycling of household and commercial waste, recycling of paper, recycling of tire, recycling of plastics, green chemistry, bioremediation, phytoremediation.

Unit-IV: Mutagenic Pollutants

Mutation, effect of mutations, induction of mutation (UV-light), ionizing radiations, chemical mutagens, metabolism of chemical carcinogens.

Unit-V: Electrochemistry in Pollution Control

Electrochemistry of water splitting, large-scale solar hydrogen production, fixing of CO₂, electro chemical removal of wastes (waste water, SO₂, removal of metals, destruction of nitrates, organic wastes, sewage disposal).

Books Recommended

2. J.O'M. Bockris and A.K.N. Reddy, Modern Electrochemistry, (volumes 1 & 2), Plenum Press, N.Y. (2001).
3. M.H.Yu., Environmental Toxicology, Lewis Publisher, Washington DC. (2001).

**EC 402: Global Prospects towards Environmental Ethics and Sustainable Development
(Major Elective)**

M.M.: 60

UNIT I

1. Totality of environment-Holistic view and ecology to environmental Science .
2. Environmental Science on the move.
3. Ecosystem Management and Environmental ethics in Environmental management.
4. From Stockholm to Rio and Beyond.
5. Human Impact on Natural Environment.

UNIT II

1. Global issues and strategies.
2. Nanotechnology: Boon or Threat.
3. World Trade and environment.
4. The vital issues process: Managing critical infrastructures in the global areas.
5. Managing the Environment: The Physical and Socio economic setting.

UNIT III

1. Terrorism and its impact on human ecosystem.
2. Effects of Nuclear Explosions and Threat of Nuclear Terrorism.
3. Genesis of Biological warfare and current threat.
4. Chemical warfare.
5. The chemical weapons convention.

UNIT IV

1. The global environment debate.
2. Managing global commons.
3. Poverty, Trade, DEBT, and Environment.
4. Intellectual Property Rights (IPR).
5. Economics and ethics: Foundation of a Sustainable future.

UNIT V

1. Sustainable Development: brief history and interpretation.
2. Sustainable development in India.
3. Rural development, industrialization and self employment.
4. Strategies and appropriate Technologies for Sustainable Development.
5. Environmental Accounting.

Books Recommended

Okour Nawal 2014: Environmental Ethics and sustainable Development; Environmental values & Ethics among Yarmouk University students; Publisher: Lap Lambert
Engel J. Ronald 1991: Ethics of Environment & Development. Global Challenge, International Response.

**EC - 105 and 106
Ist semester
Practical Examinations**

M.M.: 100

**One day 6-8 hrs. (Each course)
Two exercises to be given in each examination**

CLASSICAL

1. Neutralization titration
 - (a) Determination of Acidity.
 - (b) Determination of free carbon dioxide.
 - (c) Determination of alkalinity.

2. Complexometric titration
 - (a) Determination of temporary and permanent hardness.
 - (b) Determination of total, calcium and magnesium hardness.

3. Precipitation titration
 - (a) Determination of chloride.

4. Redox titration
 - (a) Determination of ferrous iron.
 - (b) Determination of copper.

INSTRUMENTAL

1. Spectrophotometric/ Colorimetric determination
 - (a) Determination of nickel.
 - (b) Determination of hexavalent chromium.

2. Conductometric determination
 - (a) Determination of strength of acid against standard alkali.
 - (b) Find out the strength of mixture of acids in an unknown mixture.

3. pH metric determination
 - (a) Determination of strength of acid against standard alkali.
 - (b) Find out the strength of mixture of acids in an unknown mixture.

4. Chromatographic determination
 - (a) Identification of a sample compound and its separation from a binary mixture by
 - (i) Paper chromatography (ii) Thin layer chromatography and (iii) Electrophoresis.

SEPARATION TECHNIQUES

1. Determination of the distribution coefficient of iodine between CCl₄ and water.

Handwritten signatures and initials at the bottom of the page, including a large stylized signature and another signature that appears to read 'Anish'.

EC - 205 and 206
2nd Semester
Practical Examinations

M.M.: 100

One day 6-8 hrs. (Each course)
Two exercises to be given in examination

CLASSICAL

1. Physio-chemical analysis of water
 - (a) Determination of total dissolved and suspended solids.
 - (b) Determination of residual chlorine.
 - (c) Determination of chlorine demand.
 - (d) Determination of bicarbonate and carbonate alkalinity.
 - (e) Find out the concentration of sulphite.

2. Measurement of organic pollutant in the water
 - (a) Determination of Dissolved Oxygen (DO).
 - (b) Determination of Biological Oxygen Demand (BOD).
 - (c) Determination of Chemical Oxygen Demand (COD).

INSTRUMENTAL

1. Spectrophotometric/ Colorimetric determination
 - (a) Determination of nitrite.
 - (b) Determination of phosphate.
 - (c) Determination of sulphide.

2. Conductometric determination
 - (a) Determination of strength of alkali against standard acid.
 - (b) Find out the strength of mixture of acids in an unknown mixture against N/10 NaOH.

3. pH metric determination
 - (a) Determination of strength of alkali against standard acid.
 - (b) Find out the strength of mixture of acids in an unknown mixture against N/10 NaOH.

4. Determination of oil and grease in water sample by gravimetric method.

Quito

EC – 305 and 306
3rd semester
Practical Examinations

M.M.: 100

One day 6-8 hrs. (Each course)
Two exercises to be given in examination

CLASSICAL

1. Determination of Organic Nitrogen.
2. Determine the saponification value of given oil sample.
3. Determination of Iodine Value in given oil sample.

INSTRUMENTAL

1. Spectrophotometric/ Colorimetric determination
 - (b) Find out the composition of binary mixture calorimetrically.
 - (c) Determination of nitrate.
 - (d) Determination of sulphide.
 - (e) Determination of copper.
 - (f) Determination of iron.
 - (g) Determination of Ammonia Nitrogen.
2. Measurement of different parameters in soil
 - a) Determination of Ash.
 - b) Determination of moisture.
 - c) Faecal coliform test & Total coliform test.
 - d) NPK Value in soil.
3. Determination of sulphate by Turbidometric method.
4. Determination of Noise by Noise meter.
5. Determination of adsorption isotherm of acetic acid from aqueous solution by using activated charcoal.

Divya

EC - 403 and 404
IV- Semester
Practical Examinations

M.M.: 100

One day 6-8 hrs (Each course)
Two exercises to be given in examination

CLASSICAL

1. Determination of aspirin by Volumetric Assay.
2. Isolation of Starch from Potato.
3. Estimation of Lactose in milk.
4. Isolation of Casein from milk.
5. Determination of Caffeine

INSTRUMENTAL

1. Spectrophotometric/ Colorimetric determination
 - a. Find out the composition of binary mixture calorimetrically.
 - b. Determination of Salicylic acid by Spectrophotometer.
 - c. Determination of Ascorbic acid by Spectrophotometer.
 - d. Determination of Paracetamol in given tablet by Spectrophotometer.
2. Measurement of different parameters in medicines
 - a) Volumetric Estimation of ibuprofen
 - b) Determination aspirin by Volumetric Method.
 - c) Volumetric assay of ascorbic acid by iodometric titration
 - d) Volumetric assay of ampicillin
3. To Separate the Paracetamol and ibuprofen by TLC method.
